

Edge API Lifecycle and Tools

apigeetool

Prerequisites

1. Node
2. Apigeetool npm
3. Edge account with deploy access

apigeetool

Tool for deploying API proxies and Node.js applications to the Apigee Edge platform. For detailed info on functions and parameters - <https://www.npmjs.com/package/apigeetool>

The tool also lets you list and undeploy API proxies. More time to focus on what really matters by automating repetitive tasks

This is an npm module and can be installed by running “`npm install -g apigeetool`”

To deploy a proxy, the command is “`apigeetool deployproxy -u sdoe@example.com -o sdoe -e test -n example-proxy -d .`”

apigeetool

apigeetool has the following functions:

- deploying an API proxy to Edge
- undeploying an API proxy from Edge
- deploying Node.js apps to Edge
- listing deployed API proxies on Edge
- retrieving deployed proxies and apps from Edge
- deleting proxy definitions from Edge
- retrieving log messages from Node.js apps deployed to Edge
- create or delete an API product in Edge
- create or delete a Developer in Edge
- create or delete a Developer Application in Edge
- create or delete a Cache resource in Edge
